Clone structure

A clone preserves the same structure of his original proto plus the extra packages installed, files copied, particular settings and custom user modifications. See (A) an example clone with the `nginx` package installed for web server role, and (B) another clone with the `couchdb` package installed for a database server role, both clones come from the same proto (many files/directories are omitted for simplicity):

```
bin/
boot/
dev/
etc/
  nginx/
    fastcgi_params
    mime.types
    nginx.conf
    …
    init.d/
      nginx
var/
 www/
   nginx-default/
     index.html
     50x.html
     …
log/
  nginx/
    lib/
      nginx/
sbin/
  nginx
...
```

Example A: clone with the `nginx` package installed

```
bin/
boot/
dev/
etc/
  nginx/
    fastcgi_params
    mime.types
    nginx.conf
    …
    init.d/
      nginx
var/
 www/
   nginx-default/
     index.html
     50x.html
     …
log/
  nginx/
    lib/
      nginx/
sbin/
  nginx
...
```

Example A: clone with the `nginx` package installed
